

RelayX

AI ORCHESTRATION Technical Flowchart Atlas

Version 0.1 | 8 October 2026

Ten vector diagrams accompany the architecture parent and nine subordinate specifications. They describe a proposed design, not deployed system behavior.

- D01 System context and trust boundaries
- D02 Goal intake to verified outcome
- D03 Task lifecycle state machine
- D04 Free model hunting and qualification
- D05 Durable dispatch and evidence
- D06 Worker question round trip
- D07 Planner-first failure recovery
- D08 Evaluation and routing feedback
- D09 Pause, stop and restart
- D10 Data relationships and provenance

D01 | RelayX AI control plane & execution boundaries

D02 | Goal intake → task execution → verified outcome

D03 | Proposed Task lifecycle (not transport status)

D04 | Free Model Hunter: catalog ≠ eligibility ≠ qualification

D05 | Exactly one send intent; completion requires independent evidence

D06 | Intermediate OpenCode question handled without closing work

D07 | Every execution / delivery failure returns to Planner

D08 | Task-specific evaluation, confidence and outcome feedback

D09 | Control lifecycle & restart reconciliation

D10 | Conceptual data relationships (migration must be audited)
